WEST VIRGINIA
AGRICULTURAL STATISTICS**

in cooperation with West Virginia Department of Agriculture

2007 ANNUAL BULLETIN NO. 38

Each year, America produces a vast quantity of agricultural goods that are consumed around the globe. Although West Virginia is a small state, it plays a substantial role in American agriculture, generating nearly a half-billion dollars in agricultural production annually.

Keeping track of the Mountain State's various types and amounts of agricultural products is a huge job – one ably handled by the U.S. Department of Agriculture's National Agricultural Statistics Service – West Virginia Field Office.

Each year, Agricultural Statistics Director Dale King and his staff gather extensive data about farming in West Virginia. This information is vital to state and national decision-makers who set agricultural policy and provide programs that benefit our farmers and, therefore, all of us.

This is a particularly important year for the West Virginia Field Office, as the staff will be administering the Census of Agriculture, conducted just once every five years. By participating in the census, producers can show the nation the value and importance of agriculture in West Virginia. West Virginia farmers should receive their Census of Agriculture questionnaire in early January 2008.

If you operate a farm of any size, I encourage you to complete the Census questionnaire and return it by early February 2008. Your work deserves to be counted and your voice deserves to be heard!

Sincerely,

Gus R. Douglass
Commissioner of Agriculture

Gus R. Douglass
Commissioner of Agriculture

Your Voice:

Have you ever thought that agriculture wasn't considered a valued and important industry? Do you feel like Agriculture just doesn't count to a lot of people? The Census of Agriculture is conducted every 5 years; completing the 2007 Census of Agriculture is your opportunity to be heard and influence economic developments and impact local and national decision-making about:

- Competitive market pricing.
- Farm services.
- Transportation and marketing locations.
- Environmental and conservation issues.
- Farming trends.
- Production practices.
- New and changing technologies.

Your Future:

The 2007 Census of Agriculture will collect information concerning all areas of farming, including production expenses, market value of products and operator characteristics. A few examples of how information is used for planning and decision making are:

- County Extension offices use information for designing and planning education programs in agriculture, natural resources and community development.
- Companies use data to help determine where to locate new feed stores or equipment dealers.
- Lending institutions use information to provide funds for operating loans.
- Helps USDA determine if service centers are properly located and staffed adequately.

In short, your participation allows many people who use this Census information the ability to provide opportunities within your local community.

Your Responsibility:

Stand up and be counted! The information you provide cannot be collected by other means. Your report can make a difference to your operation, your community and to all U.S. Agriculture. West Virginia farmers should receive their Census of Agriculture report form in early January 2008. The completed Census form should be returned by early February 2008. This is the only source of complete information on all agricultural production by county. Let your voice be heard!

Our Thanks:

We express our sincere thanks to the West Virginia Farmers and Agribusinesses who participated in our surveys that made this publication possible. Personnel from the West Virginia Cooperative Extension Service, Farm Service Agency, National Resources Conservation Service, and the National Weather Service who consistently provide timely information on a regular basis, we also say "Thank you."

Sincerely yours,

Dale R. King
Director

The month of **January** was one of the warmest on record as it started with above normal temperatures in the 60s and the warmer weather continued through the month with mostly cold overnight temperatures in the teens and 20s. The monthly average temperature was 40 degrees, compared to 35 degrees in 2005. Colder air arrived in the beginning of **February**, but warmer temperatures in the 70s appeared again in the middle of the month with very cold overnight lows in the single digits. The monthly average temperature was 34 degrees, compared to 36 degrees in 2005. **March** started with temperatures gradually increasing and staying close to normal then in the middle of the month, cooler temperatures arrived and continued through the end of the month. The monthly average temperature was 42 degrees, compared to 38 degrees in 2005. Temperatures warmed up in **April** with readings in the 70s and 80s. The monthly average temperature was 56 degrees, compared to 54 degrees in 2005. The beginning of **May** started dry and then became damp and chilly in the second week and stayed that way, warming up at the end of the month. The monthly average temperature was 59 degrees, compared to 58 degrees in 2005. **June** started out with warm temperatures in the 80s and 90s, but cooled down a little in the second week to the end of the month as rain moved in, bringing down temperatures. The monthly average temperature was 68 degrees, compared to 72 degrees in 2005. **July** had temperatures in the 90s with a brief period of cooler weather in the third week. The monthly average temperature was 74 degrees, compared to 76 degrees in 2005. **August** was hot with humid temperatures. The monthly average temperature was 74 degrees, compared to 75 degrees in 2005. In **September** temperatures started to cool down with the help of heavy thunderstorms throughout the month. The monthly average temperature was 63 degrees, compared to 69 degrees in 2005. **October** started off with warmer temperatures in the 80s and later became cooler with frost and freeze warnings being issued for many communities. The monthly average temperature was 52 degrees, compared to 56 degrees in 2005. Temperatures reached into the 70s for a couple of afternoons with cooler nights in the teens at the beginning of the month of **November**, cooling down a bit at the end of the month. The monthly average temperature was 46 degrees, the same as 2005. **December** started with cooler temperatures and warmed up in the middle of the month through the end with unusually warm weather in the 60s. The monthly average temperature was 40 degrees, compared to 31 degrees in 2005.

PRECIPITATION

January had a rainy start, especially in the eastern panhandle that continued through the month, tapering off at the end. The monthly average precipitation was 3.50 inches, compared to 3.80 inches in 2005. This **February** was one of the driest in many years, but dry, cold air brought snow to the state this month. The monthly average precipitation was 1.19 inches, compared to 2.18 inches in 2005. **March** started out dry but scattered showers and thunderstorms brought precipitation and the month ended with a mix of snow and rain, mostly in the southern parts of the state. The average monthly precipitation was 1.64 inches, compared to 3.71 inches in 2005. Heavy showers and hail brought **April** in with a bang and rain continued through out, with drier conditions in the last week. The monthly average precipitation was 4.23 inches, compared to 3.57 inches in 2005. Mostly the southern sections of the state had light rain in the beginning of **May** and the month ended with some heavy showers and hail. The monthly average precipitation was 2.49 inches, compared to 3.49 inches in 2005. **June** was mostly rainy except for one very dry week that was followed by another wet week as a weak front stalled over the state at the end of the month. The monthly average precipitation was 5.92 inches, compared to 1.66 inches last year. **July** had periods of scattered rain and isolated thunderstorms, making very wet conditions throughout the month. The monthly average precipitation was 4.21 inches, compared to 4.99 inches in 2005. **August** started dry, but in the second week, heavy thunderstorms hit the southern communities. Rain showers were scattered throughout the month. The monthly average precipitation was 3.59 inches, compared to 4.09 inches in 2005. In the beginning of **September**, slow-moving thunderstorms brought excessive rain and damaging hail, along with flooding to many areas. The month ended with scattered rain and thunderstorms. The monthly average precipitation was 4.88 inches, compared to 0.73 of an inch in 2005. **October** was a wet and rainy month with a flood watch being issued at the end of the month. The monthly average precipitation was 4.78 inches, compared to 3.87 inches in 2005. **November** was unusually wet with the northern part of the state getting the most rain, but drier weather moved in at the end of the month. The monthly average precipitation was 2.87 inches, compared to 3.41 inches in 2005. **December** had a mix of drier weather with scattered rain. The monthly average precipitation was 1.63 inches, compared to 2.23 inches in 2005.

CROPS

GENERAL

Corn grain yields were up from normal due to favorable growing conditions, while silage yields were normal. Alfalfa hay yields were up slightly above normal, but all other hay yields were down slightly. Soybean yields were normal, while wheat yields were above normal.

ALL HAY

All hay harvested area in 2006 totaled 590,000 acres, up 15,000 acres from 2005. The average yield in 2006 was 1.77 tons per acre compared to 1.86 tons per acre in 2005. Production totaled 1.046 million tons, down from 1.070 million tons in 2005. Value of production totaled \$67.8 million, slightly below the revised \$67.9 million in 2005. Price per ton averaged \$65.00, compared to \$63.50 for 2005.

ALFALFA & ALFALFA MIXTURES

Alfalfa hay area harvested totaled 35,000 acres in 2006, unchanged from 2005. Yields in 2006 averaged 2.9 tons per acre, up 0.1 of a ton from 2005. Production totaled 102,000 tons, up 4,000 tons from 2005. Value of production totaled \$11.1 million, up 5 percent from 2005. Average price per ton was \$109.00, up \$1.00 from the revised average price for 2005. New seedings of alfalfa in 2006 were estimated at 4,000 acres, down 3,000 acres from 2005 seedings.

OTHER HAY

All other hay area harvested totaled 555,000 acres in 2006, up 15,000 acres from 2005. Yields averaged 1.7 tons per acre, down 0.1 of a ton from 2005. Production totaled 944,000 tons, down 28,000 tons from 2005. Value of production totaled \$56.6 million, down 1 percent from the revised value for 2005. Price per ton averaged \$60.00, up \$1.00 from the revised average in 2005.

CORN

Area planted to corn for all purposes in 2006 totaled 45,000 acres, unchanged from 2005. Harvested area for grain totaled 26,000 acres, down 2,000 acres from 2005. The average yield of 120.0 bushels per acre was up 11 bushels from the previous year. Production was 3.12 million bushels, up 2 percent from 2005. Value of production totaled \$10.8 million, up 63 percent from the revised value for 2005. Average price per bushel was \$3.45, up \$1.28 from the revised average for 2005. Corn for silage area harvested was 18,000 acres in 2006, up 2,000 acres from 2005. Yields averaged 17.0 tons per acre which was up 1.5 tons from the previous year's yield. Silage production was estimated at 306,000 tons, up 23 percent from 2005.

SOYBEANS

Area planted to soybeans totaled 17,000 acres, down 1,000 acres from 2005. Area harvested for beans totaled 16,000 acres, also down 1,000 acres from 2005. The yield for soybeans in 2006 averaged 42.0 bushels per acre, up 7 bushels from 2005. Production was estimated at 672,000 bushels, up 13 percent from 2005. Value of production totaled \$4.1 million, up 24 percent from the revised value for 2005. Price per bushel averaged \$6.05, up \$0.56 from the revised average for 2005.

WHEAT

Wheat planted acres totaled 8,000 in 2006, up 1,000 acres from 2005. Area harvested for grain totaled 6,000 acres, up 1,000 acres from 2005. The average yield for 2006 was estimated to be 61.0 bushels per acre. This was up 1 bushel from the previous year. Production was estimated at 366,000 bushels, up 22 percent, or 66,000 bushels from 2005. Value of production totaled \$1.2 million, up 35 percent from the revised value for 2005. Price per bushel averaged \$3.40, up \$0.33 from the revised average for 2005.

^{1/} Value of production is computed by multiplying the market year average price by production. Value of production estimates relate to the crop year. These estimates should not be confused with cash receipts, which relate to sales during a calendar year irrespective of the year of production. Principal crops include corn for grain, soybeans, winter wheat, hay and tobacco. ^{2/} Estimates in 2006 and later exclude tobacco as a principle crop. * Revised.

^{1/} Value of agricultural sector production is the gross value of the commodities and services produced within a year. Net value added is the sector's contribution to the national economy and is the sum of the income from production earned by all factors-of-production, regardless of ownership. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development. ^{2/} A positive value of inventory change represents current-year production not sold by December 31. A negative value (in parentheses) is an offset to production from prior years included in current-year sales. Source: Economic Research Service, USDA. *Revised.
